AMORSO-452G

Adhesion Promoter

Introduction:

AMORSO-452G can increase the adhesion of film to metal, some plastics and other substrates, it has excellent miscibility. It has the characteristics of solvent resistance, acid and alkali resistance and increases the adhesion of the substrate, while improving the hardness and toughness of the film.

Features:

- increase the adhesion of solvent-borne self-drying baking paint to substrates
- increase film softness
- good miscibility
- improve acid and alkali resistance, salt spray resistance

Technical data:

Composition: polyester polymer

Appearance: light color liquid

Non-volatile part: 57.5%±1.5%

Solvent: alcohols/esters

Acid value: 28-34

Applications:

- solvent-borne/UV/water-borne
- PU paint
- self drying paint
- industrial paint
- plastic paint
- coil coating
- printing ink

Usage and dosage:

In general, the weight ratio of the addition against non-volatile part in the resin is 1%-3%, 5%-10% in some special conditions.

Package:

25KG plastic barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage.]
