AMORSO-452P

Adhesion Promoter

Introduction:

AMORSO-452P is a special polyester polymer, which is used to increase the initial and permanent adhesion of the coating film to metals, minerals and some plastics, it has excellent miscibility. Because AMORSO-452P has good affinity to metal pigments, it is used to prevent silver paint from falling.

Features:

- increase the adhesion of solvent-borne self-drying paint to substrate
- increase film gloss
- increase film softness
- prevent migration of plasticizers
- improve acid and alkali resistance, salt spray resistance
- improve storage stability of silver paint

Technical data:

Appearance: light color liquid

Active substance: 60%

Applications:

resins, acrylic coatings, nitrocellulose coatings, saturated polyester coatings, polyurethane coatings, vinyl chloride copolymerization coatings, chlorinated rubber, ketone resin coatings, PVC resin coatings, synthetic elastomer coatings for alkyd/amino paint

Usage and dosage:

In general, the weight ratio of the addition against non-volatile part in the resin is 1%-3%, 5%-10% in some special conditions.

Package:

25KG plastic barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage.]
