AMORSO-456

Adhesion Promoter

Introductions:

AMORSO-456 is a special polymer, which is used to increase the initial and permanent adhesion of the coating film to metals, minerals and some plastics, it has excellent miscibility, high gloss preservation especial for the acrylic system.

Features:

- increase the adhesion of solvent-borne self-drying paint to substrate
- increase film gloss(especial for acrylics system)
- increase film ductility
- prevent migration of plasticizer

Technical data:

Composition: polyester polymer

Active substance: 80% ± 3%

Appearance: light color liquid

Solvent: alcohols/esters

Applications:

resins, acrylic coatings, nitrocellulose coatings, saturated polyester coatings, polyurethane coatings, vinyl chloride copolymerization coatings, chlorinated rubber, ketone resin coatings, PVC resin coatings, synthetic elastomer coatings for alkyd/amino paint

Usage and dosage:

In general, the addition amount is 0.5%-3% of the weight of total coating.

Package:

25KG plastic barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage.]
