## AMORSO-459G

### Adhesion Promoter

#### Introduction:

AMORSO-459G is a special polymer, which is used to increase the initial and permanent adhesion of the coating film to metals, minerals and some plastics, it has excellent miscibility. Because AMORSO-459G has good affinity to metal substrate, it is very good for substrate adhesion.

#### Features:

- increase the adhesion of solvent-borne self-drying paint to substrate
- increase film gloss(especial for acrylics system)
- increase film ductility
- prevent migration of plasticizers

#### Technical data:

Appearance: light color liquid

Active substance: 80% ± 3%

Solvent: alcohols

#### Applications:

resins, acrylic coatings, nitrocellulose coatings, saturated polyester coatings, polyurethane coatings, vinyl chloride copolymerization coatings, chlorinated rubber, ketone resin coatings, PVC resin coatings, synthetic elastomer coatings for alkyd/amino paint

#### Usage and dosage:

In general, the addition amount is 0.5%-5% of the weight of total coating.

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage. ]
