## AMORSO-1879

### UV Adhesion Promoter

#### Introduction:

AMORSO-1879 is a kind of double bond active functional agglomeration compound, which is used to increase the initial and permanent adhesion of the coating film to metals, minerals and some plastics such as PET, it has excellent miscibility.

#### Features:

- increase adhesion of UV light curing to metal and plastic substrates
- increase film flexibility
- enhance water resistance

#### Technical data:

Acid value: >100

Appearance: light color liquid

Active substance: 100%

#### Applications:

- light curing coatings
- waterborne light curing coatings
- unsaturated coatings
- polyurethane coatings
- synthetic elastomeric coatings

#### Usage and dosage:

General dosage is 0.5%~5% of solid part of the resin in the coating.

#### Package:

25KG plastic or iron barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage.]
