AMORSO-452K

Adhesion Promoter

Introduction:

AMORSO-452K can improve the adhesion to all kinds of metal substrates, increase the interlayer adhesion of the coating and provide lasting hydrolysis resistance to the coating.

Features:

It can increase the permanent tightness of coating film to metal, some plastics and other substrates with excellent miscibility. It has the characteristics of solvent resistance, acid and alkali resistance and increasing the adhesion to substrate, while improving the hardness and toughness of the film.

Technical data:

Composition: polyester polymer

Appearance: light color liquid

Active substance: 66.5%±1.5%

Solvent: alcohols

Applications:

- increase the tightness of solvent-borne self-drying, baking paint and other substrates
- increase film's gloss
- increase film's softness
- prevent plasticizer migration
- improve acid and alkali resistance, salt spray resistance

Usage and dosage:

- In general, the weight ratio of the addition against non-volatile part in the resin is 1%-5%.

Package:

25KG plastic barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage.]
