# AMORSO-1829F

## Cooling Agent

### Introduction:

- AMORSO-1829F is a closed sulfonate baking paint curing promoter, especially suitable for hexamethyl etherified melamine baking paint system which needs strong acid to promote curing.
- It can reduce the baking temperature or shorten the baking time.

### Features:

A semi-enclosed P-TSA acid catalyst with excellent catalytic performance.

### Technical data:

Composition: mixed acid

Appearance: light yellow to light brown liquid

Non-volatile part: 60.5%±3%

Solvent: alcohols/esters

### Applications:

- solvent-borne/water-borne
- industrial baking paint
- coil coating

### Usage and dosage:

- Addition amount 0.1%-2% of the total amount of baking paint(recommended to dilute with isopropanol by 1:3 before addition).
- The reactivity of various acrylic or polyester and amine-based resins is different, consider baking temperature or time to increase or decrease the dosage. Please test the storage stability of baking before use.

### Package:

25KG barrel

[The above data and specification is only for reference, customer should do the test based on different application and requirement to see if it is appropriate and suitable for their usage. ]
